

Hi, I'm Andy and I'm going to explain how our Grade 7 at Mt. Pleasant school have used laptops in class far.

I find laptops and net books are a convenient way for a teacher to teach his or her students. For one it doesn't waste much paper on projects or everyday work, the work can be sent through Edmodo or Smart Synch, which saves time and paper. Laptops are a much more fun way to do work compared to pencil and paper because it's something different, it has more interactive links and you could probably type faster than you could write. For projects laptops or net books are a big help because instead of going to the computer lab or waiting until we get home to do research we can do it right in class. Have you ever heard of art on a computer? I didn't until our first art assignment on the computer, to make an animation using the program Paint, it was much more convenient than using pencil and paper because you didn't have to keep redrawing the background or characters instead you could make a small movement and save it as a different file.

These things I think have been a big advantage with our school work, what do you think? That's all for now, Andy.
